

Group 3200_21

Minutes of Meeting 9

23/09/2026

Present: Christo, Dylan, Lithasa, Dhava, Murphy, Terry

Apologies:

Absentees:

Meeting Start: 1.00pm

Meeting End: 1.20pm

Time:	Item #	Topic:	Details:	Action:
13:00	1	Demo	Christo demonstrated progress on gesture recognition implementation using rl-lab Demonstrated person id - robot moves but won't stand up	
13:10	2	Feedback	Gesture recognition - Good enough to submit but just make the demo look better - Record demo video - Using hand gesture vs using a button/ joystick for commands Person identification: - It should be 7-dimension output by the algorithm, currently it does only 1 (sometimes 3, it's inconsistent) - Try to fix it in 2 weeks for everyone to pass - Only mimic upper body, just two arms (waist and lower body not to be considered) - Send Oliver a video when completed Just stick to simulation only, instead of testing on the real robot Is the walking policy going to destroy the lower body policy? - One policy control upper body - One controls the lower body - It won't overpower each other	Dylan, Dhava to complete the mimicking implementation, including converting the upper body movements to 7 joint dimensions per arm (within the next 2 weeks) Terry, Murphy to complete any remaining gesture recognition development Christo to record demo video
13:20	3	Next meeting	Week 12	
13:20	4	Meeting end
